

HAI OmniTouch[®] 5.7e

The OmniTouch 5.7e is HAI's premier plug-and-play Touchscreen featuring customizable graphics for control of lights and small appliances, to monitor and adjust security and temperatures, pool and spa settings, ventilation, multi-room audio, surveillance video, and other essential elements controlled by an HAI home automation system.

FEATURES

- 5.7" LCD VGA display with TFT technology

- 640x480 screen resolution for vibrant graphics

- HAI OmniTouch Pro Software with surveillance video capability

- 10/100 Ethernet Port for communication and power (PoE)

- Speaker for more pleasing audio tones

- Auto-dimming sensor for softer night-time display

- Built-in USB and Ethernet ports for easy firmware updating

- VoIP intercom technology for communication and paging*

Intercom screen shown with gold finish aluminum faceplate.

NEW Built-in VoIP Intercom communication

Speak with other 5.7e Touchscreens or a Connectivity Partner's door station while viewing live video of your guest. De-activate the gate lock on screen and allow access. Intercom features adjustable auto-answer, do-not-disturb mode, and speaker/microphone volumes.

*Intercom feature requires HAI Automation Studio software.

The OmniTouch 5.7e Touchscreen can be fully customized with HAI Automation Studio software. The on-screen interface can be as unique as you are by reflecting your interests and preferences.

The 5.7e features high end user interface capabilities in an efficient flush wall-mount application. A single Ethernet connection for all communication as well as power using Power-Over-Ethernet (POE) technology simplifies the installation process.

Navigate between rooms and settings through high a resolution graphic interface. Browse your media, view album art and meta-data via HAI's Music Gateway.

The OmniTouch 5.7e is compatible with HAI's OmniPro IIe, OmniPro II, Lumina, and Lumina Pro controllers. Easily adjust security settings with just a touch: arm, disarm, vacation, or away. View an event log to see who has accessed the security system and when. Also view indoor and outdoor temperatures and humidity and adjust the heating or cooling

within a room or the entire house. Humidor and wine cellar temperatures are also viewable with the ability to monitor water temperature sensors.

Adjust the lighting in any room. Easily dim, set up timing sequences, or turn all lights on/off by switch, by room, or by entire house.

Control Hi-Fi by HAI or an audio system from one of HAI's Connectivity Partners. OmniTouch 5.7e emulates the NuVo, Russound, SpeakerCraft, Proficient, and Xantech audio keypads for a clutter-free appearance with full functionality (see HAI Connectivity Partners for exact models).

Note: A Power Sourcing Equipment (PSE) device, such as a PoE network switch, hub, or power injector is required.
