Pull Arm Door Setup

AutoSwing is the most advanced automatic swing door operating system on the market.

The AutoSwing Automatic Door System offers a high standard of performance within a slimline design.

The low height of only 3.15 inches allows the AutoSwing System to be mounted to a door's transom.

The system comes with push arm and slide arm configurations, allowing installation on most swing door models. The combination of these design features and whisper quiet operation of the mechanism provide for easy automation of a manual door, while maintaining an aesthetically pleasing look.
