

Splitter | Wall Plate™ PRO Cable & Satellite

Two-way signal splitters live in two separate worlds: 1. the retail world and 2. The professional installer world. Do you know of a cable company that installs the splitters offered in the retail world or a store that sells the splitters that cable companies install in our homes?

Splitter | Wall Plate™ PRO Cable & Satellite is different:

- The **PRO** splitter is Dish Network approved.
- **PRO** splitter is the Professional Installer grade **HFS-2D**, widely installed and with published specs, including lowest insertion loss from 5 to 2150 MHz.
- **PRO** splitter is Society of Cable and Telecommunication Engineers compliant with specified flat F-connectors that are 15 psi sealed and 1 inch separated.
- **PRO** splitter has patented diode-steered power passing to one or all ports.
- **PRO** splitter eliminates ingress impairments by shielding against EMI and RFI with heavy gauge construction and *soldered* steel back.
- **PRO** splitter is part of the **Splitter | Wall Plate™** which is Hand-made in U. S. A. of top quality components manufactured in U. S. A. and China.
- And, of course, **PRO** splitter requires no connector cable.

The **Splitter | Wall Plate** has just been upgraded.
