

# GETTING TO KNOW AND LOVE YOUR

## Loft™ Surge Protector with 6 Outlets

360electrical.

360electrical.com | 

### Thank you for buying a 360 Electrical Loft Surge Protector.

We truly hope it gives you peace of mind having surge protection with your electronics, allowing more emotional energy for important stuff like writing your mother. Doesn't need to be long or poetic... maybe start with a text.

This handy little guide is designed to give basic information on how to use your Loft Surge Protector as well as provide all the legal warranty-related stuff. The margins also provide plenty of space for grocery lists and online passwords.

#### Help Us Help You—Register Now.

Log on the ol' interweb and head to our website to register your new Loft Surge Protector. It'll initiate the rock star treatment you so richly deserve and get you advanced notice on new products from 360!

### POINTY HEADED STUFF

#### First, a few technical things that make our engineers pretty proud:

**Model #:** 360301

**Electrical Ratings:** 15A 125V 60Hz 1875W

**Surge Energy Joule Rating:** 900 Joules (a joule is a measure of how much energy a surge protector can take before it bites the dust.)

**Response Time (the time it takes for the surge protector to kick in):** <1 Nanosecond

**Maximum Spike Current:** 30,000A

**UL Clamping Voltage:** 500V

**EMI/RFI Noise Filter:** 150kHz – 100MHz up to 40 Db

#### How Your Loft Protects:

Inside your Loft is a smart little guy called a metal oxide varistor (MOV). When the voltage coming out of the wall exceeds 120 volts (standard) it acts as kind of a relief valve diverting rogue voltage from your sensitive electronics.

### CONSIDER YOURSELF WARNED!

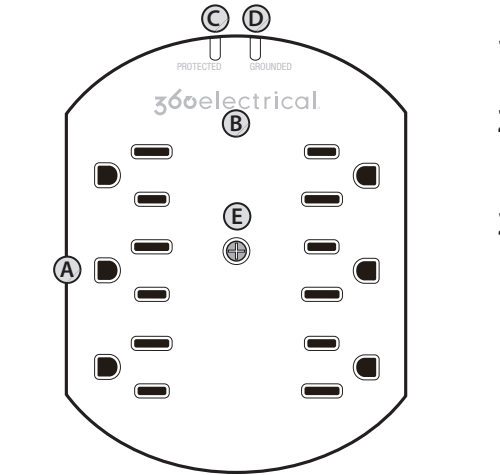

#### Please follow these cautionary statements. If you don't, your Loft might break, your warranty will be void, and you will be very unhappy with yourself.

- ▶ Use indoors only and do not use near water. You listening, SCUBA guy?! 
- ▶ Do not plug any extension cord, power strip, wall tap, or multi-outlet adapter into your Loft.
- ▶ Don't plug your Loft into anything but a grounded outlet (the kind with three holes in the socket).
- ▶ Do not plug things in that will exceed the electrical ratings (see "Pointy Headed Stuff").
- ▶ Don't use the Loft with a heater, generator, convection oven, conventional oven, microwave, sump pump, water-related device, life support device, medical device, or vehicle battery charger.
- ▶ Quit using your Loft if either indicator light is not on. (See "Loft Anatomy" for more information.)
- ▶ If you're feeling all handy and want to alter or repair your Loft... Don't.

### LOFT ANATOMY

#### Read it. Know it. There will be a quiz.

- A** (6) Horizontal AC Outlets – We tipped these outlets sideways so you can better fit weird plug shapes.
- B** Advanced Surge Protection – Deep inside lies the defender of the connected devices you plug into the outlets. It's there waiting to act on your behalf when evil transient voltage rears its ugly head.
- C** Blue "Protected" Light – This blue beacon of truth tells you everything's alright. If it goes out, your Loft has absorbed a surge and sacrificed itself to save your electronics. Shed a tear, then replace it.
- D** Green "Grounded" Light – Lets you know the outlet you're plugged into is grounded. If this light doesn't come on, no bueno, use a different outlet.

- E** Center Mounting Screw – Yes, this is supposed to be here. Allows you to firmly anchor your Loft in the wall socket. Have one of them fancy decorator outlets? Remain calm and simply remove the screw by holding the little red tab in place and use your favorite screwdriver real lefty-loosey like.

### SUPER QUICK SETUP

#### 1. Plug stuff into your Loft.

#### 2. Plug your Loft into a grounded wall outlet.

#### 3. Standard fist pump.

### QUICK SETUP

#### 1. First, remove the screw from the wallplate covering your wall outlet. Do not remove the wallplate but rather hold it in place. Dexterity level of one required here folks. Make it happen.

#### 2. Align the plug from your Loft with the top wall socket. Note: if your wall outlet is installed upside down or is installed horizontally just flip your Loft to match.

#### 3. Make sure the mounting screw on your Loft is aligned with the hole in your wallplate and use a phillips head (named after inventor Henry F. Phillips) screwdriver to firmly secure the Loft in place. NOTE: We know you're tough, but take 'er easy on the mounting screw. Over tightening = sadness. Now you can plug stuff in and out without worrying about pulling the Loft out of the wall. Not to mention it's less likely to be stolen by your neighbor Daryl.

#### 4. "Oh no! My wall outlet doesn't look like that, what do I do with the mounting screw!" If you have "decorator-style" wall outlets, props to you for your fashion sense. Use a phillips head (named after pop divas Wilson Phillips) screwdriver and just "Hold On" to that little red tab as you back the screw out. Now plug your Loft in, effectively covering your fancy outlet.

#### 5. Time to get your plug on. Your gadgets are now under the watchful care of your new Loft.

### WARRANTY

#### LIMITED LIFETIME WARRANTY

The Limited Lifetime Warranty of this product—360 Electrical Surge Protector, Model #360301 is subject to all of the conditions and exclusions contained in the articles below. This Limited Lifetime Warranty gives you, the original purchaser, specific legal rights along with additional rights that apply in certain states. This Limited Lifetime Warranty applied only to the enclosed 360 Electrical model. 360 Electrical warrants to the verified original purchaser of this 360 Electrical Surge Protector for the life of this product that there will be no defects in craftsmanship, materials, assembly or design. Should there be any defects in any of the categories listed above 360 Electrical will, at its sole discretion, repair or replace the defective Surge Protector at no cost to the original purchaser. The life of the Surge Protector is defined as the period of time that the Surge Protector has the capacity to protect against power surges and spikes. The "Protected" indicator light will no longer illuminate when this capacity is exceeded.

#### CONNECTED EQUIPMENT LIMITED WARRANTY

360 Electrical's Connected Equipment Warranty covers only equipment that is damaged or destroyed by transient voltage while properly connected to a properly wired AC power line with protective ground. Transient voltage or a "Power Disruption" is defined as a brief voltage spike and/or surge on the AC power. 360 Electrical, at its option, will pay the present fair market value for the replacement or repair of the damaged connected equipment up to the maximum amount stated below:

#### Item - 360301 | Up to a maximum of \$100,000.00

This is a Limited Warranty and is subject to the conditions and provisions contained in the following articles. This warranty is null and void if any of the following conditions exist: (a) the equipment is not properly connected to the Surge Protector, (b) the Power Disruption damages your equipment through phone, network or coaxial lines, (c) the Surge Protector has been improperly opened or installed or has been tampered with, (d) the damage was not a result of a Power Disruption or a Power Disruption never took place, (e) or the Surge Protector was not used under normal operating conditions in accordance with the user instructions or the original purchaser does not make a claim within 15 days from the date of the Power Disruption with the purchase receipt for the Surge Protector and equipment for which the claim is made. This Warranty does not

#### protect against acts of God (flooding, erosion or earthquake), war, vandalism, theft, normal wear and tear from use, depletion, obsolescence, abuse, damage from from brownouts or sags or equipment alteration.

#### This Warranty is null and void if any person or facility not authorized by 360 Electrical not protect against, and 360 Electrical, LLC is free from liability, the incidental, indirect, direct or consequential monetary damages occurring from the sale or use of the Surge Protector such as loss of revenue, sales and/or profits.

This Warranty is limited to the losses not covered by the original purchaser's home owner's insurance or renter's insurance and the original purchaser cannot seek duplicate coverage under this Warranty. 360 reserves the right, at its sole discretion, to review and investigate all of the conditions and provisions listed above and determine whether any or all conditions exist making the claim null and void.

#### HOW TO MAKE A CLAIM

To make a claim, visit 360electrical.com and provide the required information or follow the steps below.

- 1) Mail the Surge Protector, at your expense, to the address at the bottom of the page
- 2) Provide the part number for the Surge Protector
- 3) Mail (if applicable), at your expense, the equipment that was connected to the Surge Protector
- 4) Explain in writing the extent of the damage that occurred to the connected equipment
- 5) Provide the date of the occurrence
- 6) Provide a copy of the original purchase receipt for the Surge Protector and damaged equipment
- 7) State when and where the purchases were made (if not clearly marked on the receipt)
- 8) Provide evidence of damage to connected equipment (pictures, the equipment itself, etc.)
