

Water Shut-Off Valve

Water damage has finally met its match.

The Ezlo Smart Water Shut-Off Valve is the industry's smartest water management solution, featuring a two-part design — ball valve and actuator — that distinguishes it from every other shut-off valve on the market.

Unlike other automatic water shut-off valves that use the property's original low-cost water shut-off valve, the Ezlo smart Water Shut-Off Valve actuator sits atop a custom, high-quality valve tested to withstand the test of time to control the flow of water.

- Water valve can be separated from the smart actuator
- Can serve as the foundation for an entire smart home automation system
- Can pair with other security devices like flow meters or leak sensors
- Sends alerts right on your smartphone
- Can be actuated manually from the included lever, remotely via the app, or included in personalized automations.

Ezlo Water Shut-Off Valve comes in two flavors

V1: Ezlo Water Shut-Off Valve with Built-in hub (V1: Z-Wave Hub)

Version 1 includes a Z-Wave Hub which allows for Z-Wave water sensors to connect directly to it. In fact, you can connect other Z-Wave devices (up to 30 total) to the smart actuator that are then all controlled through the Ezlo Protect app.

- Wi-Fi connectivity
- Acts as Z-Wave hub
- Can be operated via Ezlo cloud
- You can pair other Z-Wave devices
- Cannot be included as a Z-Wave client in other hubs
- Can be used with other E450/E550 in EZlogic (via Cloud)

V2: Ezlo Water Shut Off-Valve as a Z-Wave Client (V2: Z-Wave Client)

Version 2 acts as a ZWave client, allowing it to connect to virtually any Z-Wave hub or system supporting Z-Wave.

- Acts as a Z-Wave device
- Can be paired with other compatible smart home hubs

Install now, make it smart later

Separating the brains from the ball valve makes it easier for builders. In new construction, the ball valve is installed during the plumbing phase, and the smart actuator is installed later with other low voltage gear during the trim-out phase.

The Ball Valve comes in three standard sizes of fittings to connect to industry standard pipe:

1. ¾" Ball Valve
2. 1" Ball Valve
3. 1 ¼" Ball Valve

The peace of mind you didn't know you needed

Nearly 45% of the population has experienced water damage in their home or knows someone who has. And sometimes, that damage isn't covered by insurance. The Ezlo Smart Water Shut-Off Valve empowers you to avoid the water damage and give you peace of mind.

Powered by MiOS, the first OS for property

The Ezlo Water Shut-Off Valve is powered by MiOS OS, the first operating system designed specifically for property. Our ecosystem and operating system allow you to integrate the Water Shut-Off Valve with other smart devices you own, seamlessly, regardless of brand. Automate those devices based on your specific needs, and visualize your property's data in new ways.

Key Features

Remote access via app and Z-Wave or Zigbee controller*

May qualify for homeowners insurance discounts

Ball valve separates from actuator for easy installation

Multiple valves may be used in single system

Local controls plus manual override handle

*For V1 version

Part Numbers

Part Number	Description	UPC Code
ESWV1-US	Gen II Automated Water Shut-Off Valve - ZWave Hub	850010800141
ESWV2-US	Gen II Automated Water Shut-Off Valve - ZWave Client	Coming Soon
EKBVFFN075	Ball Valve 510L F/F NPT 3/4"	850010800363
EKBVFFN100	Ball Valve 510L F/F NPT 1"	850010800370
EKBVFFN125	Ball Valve 510L F/F NPT 1 1/4"	850010800387

Specs

Materials

Lead-free brass ball valves with commercial grade seals

Polycarbonate enclosure, NEMA 4x (weather resistance)

Power

Voltage: 110 VAC converted to 24V DC (Class 2 power converter with 20' cord, 1.3A full load)

Optional battery backup
IP67 Rating

Dimensions

6.25" x 7" x 3.78"

Comes in standard NPT sizes (3/4", 1", 1 1/4")

Why Ezlo?

Ezlo is property empowered. As a global leader in smart home technology, we are on a mission to deliver true interoperability to the world. With MiOS, the first OS for property, Ezlo is disrupting the smart home market by allowing anyone with property to integrate anything, automate anything, and visualize everything.
