# QUICK INSTALL GUIDE

## 12-Port/8 PoE+ Gigabit Managed Switch

XMS-1208P

### Includes:

- ▶ XMS-1208P 12-Port/8 PoE+ Switch
- ▶ Rack Mount Kit
- ▶ Rubber Feet
- ▶ Power Cord

**LUXUL**

# INSTALLATION AND SETUP

## 1 Physical Installation

The XMS-1208P can easily be installed in a standard 19" rack. Two mounting ears are included for installing and stabilizing the switch. When attaching the mounting ears and installing the switch in a rack, please refer to the following illustration:

*Rack-mounting the XMS-1208P*

- ▶ Use the included screws to attach the mounting ears to each side of the switch.
- ▶ Mount the switch in the rack with the LEDs facing outwards. Be sure the switch is level and properly secured in the rack.

## Desktop Setup

For use as a desktop device, position and apply the included rubber feet to the bottom of the XMS-1208P.

## 2 Connecting Ethernet and Power

### Ethernet and Power Connections

Use one of the ten Ethernet ports to connect the XMS-1208P to any Ethernet-enabled device, including servers, routers, or other switches. No crossover cable is necessary.

The XMS-1208P supports 10/100/1000 Mbps Ethernet; 10/100 Mbps half/full-duplex mode and 1000 Mbps full-duplex mode. Ports 1-8 are PoE+ and are enabled by default. Ports 9 and 10 are Gigabit Ethernet only (non PoE), while ports 11 and 12 are Gigabit SFP ports.

Use the included power cable to connect the XMS-1208P to a surge-protected outlet. The AC input socket is on the rear panel. The built-in power supply supports 100-240VAC at 50-60Hz.

## Network Cabling

Luxul recommends at least Cat-5e unshielded twisted pair (CAT5e UTP) cabling. To ensure best performance and stable data transmission at 1000 Mbps, use Category-6 unshielded twisted pair (CAT6 UTP).

If you intended to use optical fiber to extend the network beyond the 300-foot limit of twisted pair Ethernet, SFP modules are required (not included).

---

**⚠ CAUTION:** *Multiple Uplink channels can create loops, resulting in network failure. Ensure only one Uplink channel exists between switches or between the XMS-1208P and a router.*

---

**✓ NOTE:** *When powering up, the port LEDs may take a moment to initialize. This is normal as the XMS-1208P initialization and startup sequence completes.*

---

**✓ NOTE:** *The XMS-1208P has an internal 130W power supply. Do not exceed 25.5W each or 130W combined consumption of all external PoE devices.*

---

## 3 Preparing for Access

### IP Addressing

If the XMS-1208P is connected to a network with a 192.168.0.X address scheme, and your computer shares a similar address on the same network, you can skip to the next step, **Access and Setup**.

---

**✓ Note:** *If another device on your network shares the address 192.168.0.3, you'll need to temporarily reassign or remove that device while you configure the XMS-1208P.*

---

If your network uses an address scheme other than 192.168.0.X, you'll need to set a temporary static IP address on the computer you're using for configuration. To do so, set the IP address of your computer to an address in the 192.168.0.X range, then set the Gateway/Router address to 192.168.0.3 (the default IP address of the XMS-1208P).

Once you're finished configuring the switch, you can return your computer's IP configuration to normal, typically "Obtain Automatically/DHCP."

---

**✓ Note:** Visit <http://luxul.com/ip-addressing> to learn more about changing your computer's IP address and getting connected.

---

## 4 Access and Setup

### Getting Connected

Use an Ethernet cable to connect your computer to the XMS-1208P, then power on the switch.

## Logging In

To access the XMS-1208P web configuration, open your web browser and enter the switch's default 192.168.0.3 IP address in the address field. Log in to the switch using the default user name and password:

**Default IP: 192.168.0.3**

**Username: admin**

**Password: admin**

Select the menu items on the left to view and/or modify the configuration.

## 5 Hardware Operation

### Front Panel

The front panel of the XMS-1208P includes 1 console port, 10 Gigabit RJ-45 ports, and 2 Gigabit SFP ports as well as LED status indicators for each port. A mode/reset button switches the display between Link/Activity and PoE modes.

*XMS-1208P Front Panel View*

## LED Indicators

The LED indicators on the XMS-1208P include System, Link/Act and PoE LEDs, and an LED for each port. These LED indicators show the operating status of the XMS-1208P and each port connection.

### Mode/Reset Button to Change LED Functionality

Tapping the Mode/Reset button briefly switches the port indicators between displaying port link speed and PoE status.

The following chart shows the LED indicators of the XMS-1208P along with an explanation of the indicator's properties:

Indicator Name	Description	
System	Flashing	Indicates normal operation.
	On	Indicates a malfunction. Contact support.
	Off	Indicates startup/initialization process or that power is not on.
Port Link/ Act Status 1-12	Green	1000Mbps device connected to the port.
	Yellow	10/100Mbps device connected to the port.
	Flashing	Port receiving or transmitting data.
	Off	Nothing connected to the port.
Port PoE Status 1-8	Green	Switch is providing PoE power to a device.
	Yellow	PoE is off due to a fault or because the connected device is exceeding power limit.
	Off	Port disconnected or link failed.

Note: At startup, the port LEDs will flash briefly during a self-test.

## Mode/Reset Button to Reset/Restore

The Reset button (located at the center of the front panel) is used to reset (reboot) the switch, or to restore the switch to factory default settings.

- ▶ **To Reboot/Reset the Switch:** With the XMS-1208P powered on, press the Reset button for approximately three seconds until the Link/Act and PoE LEDs both light, then release the button.

---

**⚠ CAUTION:** *Do not hold the button for more than four seconds. Doing so could erase all settings and restore factory defaults.*

---

- ▶ **To Restore Default Settings:** With the XMS-1208P powered on, press and hold the Reset button approximately eight seconds, until both the Link/Act and PoE LEDs turn off, then release the Reset button and the switch automatically restores factory default settings and reboots. Once the System LED starts flashing again, the XMS-1208P is running with factory defaults.

---

**⚠ CAUTION:** *Please note that restoring Default Settings will remove any/all custom configuration.*
