

Indoor/Outdoor Motion Sensor

Model HA-434TL

1. INTRODUCTION

The Indoor/Outdoor Motion Sensor is designed to monitor movement around your house. The motion sensor can be placed either indoor or outdoor. Once motion is detected, the receiver will respond with flashing along with alert beeping or alarm.

In this package, you should find an Indoor/Outdoor Motion Sensor, ball-head joint, screws.

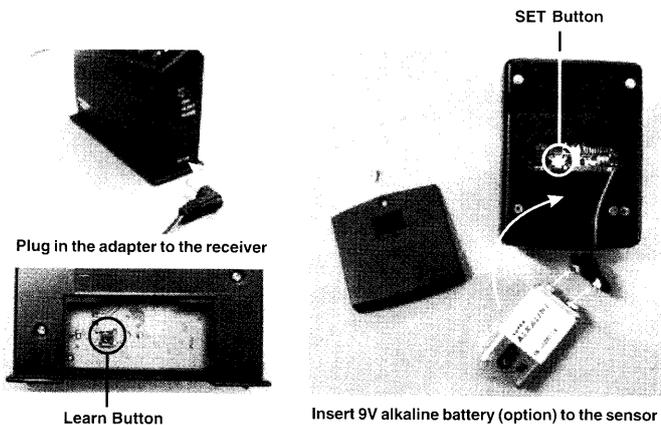

Please follow the instructions below to setup your motion sensor.

2. PROGRAMMING

The sensor must be programmed to the Household Alert® Long Range Receiver before they can communication. You may program the sensor to one of the 4 zones. Follow the instructions below:

1. Plug in an AC adapter to the receiver.
2. The green LED will be on indicating it is turned on.
3. Open the back cover and there is a learn button. Press and hold this learn button for 5 seconds, until both green LED and zone 1 red LED flash. You may now release the learn button.
4. If you would like to program the sensor to zone 1, activate the sensor while the zone 1 red LED is flashing. Press the SET button on the back of the sensor to activate it.
5. If you would like to program the sensor to other zones, press the learn button again, until the red LED flashes at the zone you want to program the sensor to, then activate the sensor.
6. Once the sensor is programmed, the green LED will be steadily on and none of the red zone LEDs will be on.

Note: Each zone can program up to 4 sensors. If you try to program a fifth sensor into a zone, the first programmed sensor will be erased.

Erasing a sensor

You cannot erase a specific sensor. You must erase all sensors from the receiver, then program the ones you would like to keep. To erase all the sensors from the receiver:

1. Remove the adapter from the receiver.
2. Open the back cover, press and hold the learn button. Do not release the learn button until step 4.
3. While holding onto the learn button, plug in the adapter to the receiver.
4. You may release the learn button when the LEDs on the receiver are on.
5. You have erased all sensors from the receiver.

3. INSTALLATION

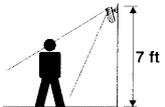

MOUNTING

A ball-head joint is necessary to mount the sensor at a desired location. A height of 7 ft is recommended, depending on your application. Once a location is selected, mount the ball-head joint to this location by screws provided. Once the ball-head joint is mounted to the wall, slide the back of the sensor into the ball-head joint. The mounting angle can be adjusted. Please refer to "Walk Test" to determine the best mounting angle.

WALK TEST

After mounting the sensor at the desired location, it is important to perform a walk test in order to determine if the sensor is detecting the things you want to detect.

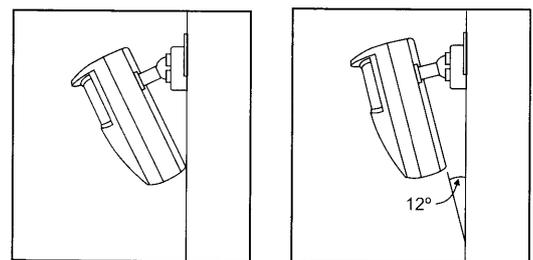

In order to control how far the sensor can "see", this can be done by adjusting the angle of the sensor. To reduce the detection range, simply move the sensor downward. To increase the range, move the sensor up to around 12 degrees. This will give the maximum range. However, this may not be desired if the sensor is placed outdoors, since a false trigger may occur if the sensor is set to detect motion in a distance.

You should walk in the area that you would like the sensor to monitor. Place the slide switch on the side of the receiver to "Alert" position. The receiver will beep if the sensor detects your movement. If the receiver does not respond, adjust the mounting angle accordingly. After motion is detected once, the sensor will not be triggered unless no motion is detected for 20 seconds. Therefore, wait for at least 20 seconds during walk testing between 2 activations.

Perform walk test in the undesired area to ensure movement cannot be detected.

Tips: The sensor should not face towards direct sunlight, placing near heat or cold producing devices (i.e. A/C or furnace vents, fans, ovens, heaters etc.) that may cause false triggers.

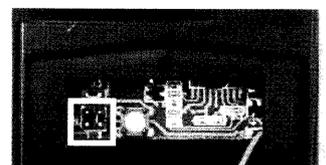

Move the sensor downward to reduce the range.

Move the sensor up to around 12° to give maximum range.

SENSOR SENSITIVITY

The sensitivity of the motion sensor is adjustable. Change the setting by placing the connector on either the "High" (connector position "1") or "Low" (connector position "2") position. When the sensitivity is set to "Low", more movement is required to trigger the sensor. It is recommended to set the sensitivity to "Low" and perform a "Walk Test". If the walk test result is satisfied, the sensitivity does not require to be adjusted further. If the walk test result shows the sensitivity is too low, then you can change the sensitivity setting to "High". Please perform the walk test after changing the sensitivity setting.

1 - High 2 - Low

4. OPERATION

There are 3 different operating modes for the Household Alert® Long Range Receiver.

- 1) Alert - Beeps when a sensor is activated, corresponding zone LED will also flash.
- 2) Alarm - Sounds an alarm when a sensor is activated, corresponding zone LED will also flash.
- 3) Off - No audio sound will be emitted when sensor is activated. Zone LED will flash to indicate the activated sensor.

To select the operating mode, place the slide switch on the side at the desired setting:

OFF - No Audio
ALERT - Alert Mode
ALARM - Alarm Mode

Operation

Alert

When motion is detected in the monitored area, the sensor will send a signal to the receiver. It will beep and the corresponding zone red LED will flash for 15 seconds.

If the sensor is set to zone 1, zone 1 red LED on the receiver will flash, and the receiver will emit a continuous "single beep", i.e. "beep" pause, "beep", pause..... etc.

If the sensor is set to zone 4, zone 4 red LED will flash, and the receiver will emit a continuous "4 beeps", i.e. "beep beep beep beep" pause "beep beep beep beep" pauseetc.

By the number of beeps emitted by the receiver, user can identify which zone is triggered.

Mute

When a sensor is triggered for a long period of time, you may stop the buzzer by pressing the mute button. When another signal comes again, you can disable the buzzer for all currently activated sensors by pressing the mute button. The receiver will beep again if it receives another signal.

For instance, if you are working in your garage, you may want to disable the buzzer for this garage only. Then you can press the "Mute" button after it starts to sound. If any other sensor is triggered, the receiver will sound again.

Alarm

When the receiver is in Alarm operation mode, it will sound its siren when a sensor is activated. The maximum alarm duration is set for 3 minutes. To terminate the siren during the 3-min interval, press the mute button. Although the alarm siren is terminated, if that sensor is still activated, its corresponding LED will continue to flash.

Note: This audio siren is not intended to prevent intruder break-in, it is rather an alert signal indicating a sensor is activated. Therefore, turning off the siren does not require specific password.

Off

No audio will be emitted even sensor is activated. Only zone LED will flash.

5. LOSS OF SIGNAL INDICATION

When the battery level on the sensor drops to a certain level, or the sensor is out of the operating range, the receiver will show a "loss of signal" indication. The red LED representing that zone will flash rapidly, i.e. if zone 1 sensor is lost, the zone 1 red LED will flash rapidly.

When the loss of signal indication occurs, move the receiver closer to the corresponding sensor and trigger that sensor. If the red LED stops flashing rapidly, that means the receiver or sensor needs to be relocated. If the "loss of signal" indication persists, replace the battery of that sensor.

6. OTHER HOUSEHOLD ALERT® SENSORS

The Household Alert® Long Range Receiver can work with up to 4 different sensors: garage door monitor sensor, door / window sensor, water sensor, indoor/outdoor motion sensor, etc. Please visit www.skylinkhome.com or contact us at support@skylinkhome.com for more information of how to fully utilize your Indoor/Outdoor Motion Sensor.

7. FCC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

WARNING:

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

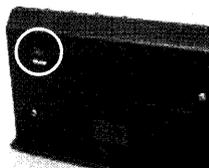

8. WARRANTY

If, within one year from date of purchase, this product should become defective (except battery), due to faulty workmanship or materials, it will be repaired or replaced, without charge. Proof of purchase and a Return Authorization are required.

9. CUSTOMER SERVICE

If you would like to order Skylink's products or have difficulty getting them to work or download information and user manual, please :

1. visit our FAQ section at www.skylinkhome.com, or
2. email us at support@skylinkhome.com, or
3. call our toll free at 1-800-304-1187 from Monday to Friday, 9 am to 5 pm EST. Fax (800) 286-1320
